```
This sequence represents a peptide fragment from a novel human type
ligand polypeptide corresponding to amino acid residues 23 to 55 of the
sequence represented in AAM3139 and is used in an assay to monitor
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
compositions containing this ligand may be used as a pituitary function
modulator, a central nervous system modulator or a pancreatic function
modulator. This ligand could have specific applications as a
modulator or therapeutic agent for dementia, depression, hyperkinetic
prophylactic or therapeutic agent for dementia, depression, hyperlyphactic or therapeutic agent for dementia, depression, hyperlyphactic or therapeutic secrolaemia, hyperlyphagia,
trauma, growth hormone secretory disease, hyper and polyphagia,
hyperlypidaemia, hypercholesterolaemia, hyperlypractideemia,
hyperlypidaemia, hypercholesterolaemia, hyperglyceridaemia,
hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease,
hyperprolactinaemia, epilepsy, amylotrophic lateral sclerosis,
cute myocardial infarction, infertility, spinocerebellar degeneration,
cute myocardial infarction, infertility, spinocerebellar degeneration,
coute myocardial infarction, infertility, spinocerebellar degeneration,
coligogalactia Assays can alloo be developed to screen compounds which are
capable of altering the binding activity of the ligand affecting
activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland
                                                                                                                                                                                                                                    Pujii R, Fukusumi S, Habata Y, Hinuma S, Hosoya M;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 15, No Sequence 13, A Sequence 13, A Sequence 13, A Sequence 40, A Sequence 41, A Sequence 82, A Seque

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Dispothetical protein allie86 [imported] - Nostoc sp. (strain PCC 7120)

C) Species: Nostoc sp. PCC 7120

A,Note: Nostoc sp. strain PCC 7120

A,Note: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120

C,Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Dec-2002

C,Accession: AH2016

-I. FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactotrophs directly to secrete PRL.

-I TISSUE SPECIFICITY: MEDULLA OBLONGATA AND HYPOTHALAMUS.
                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

"Cloning, expression, and chromosomal mapping of a human ganglioside"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Monti E., Bassi M.T., Papini N., Riboni M., Manzoni M., Venerando B., Croci G., Preti A., Ballabio A., Tettamanti G., Borsani G.; "Identification and expression of NRU3, a novel human sialidase associated to the plasma membrane."; Blochem. J. 349:1343-351(2000).
-!- FUNCTION: Plays a role in modulating the ganglioside content of the lipid bilayer at the level of membrane-bound sialyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 glycoconjugates.
--- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->8) -, alpha-(2->6) -, alpha-(2->8)-glycosidic linkages of terminal stalic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
--- SUBCELLULAR LOCATION: Membrane-associated.
--- TISSUE SPECIFICITY: Highly expressed in skeletal muscle, testis, adrenal gland and thymus, followed by pancreas, liver, heart and thymus weakly expressed in kidney, placenta, brain and lung.
--- MISCELLANBOUS: Optimum pH is 3.8.
--- SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
--- SIMILARITY: Contains 3 BNR repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens (Human).

28-FEB-2003 (Rel. 41, Last annotation update)
Sialidase 3 (BC 3.2.1.18) (Membrane sialidase) (Ganglioside sialidase)
(N-acetyl-alpha-neuraminidase 3).
                                                                                                                                                                                                                                                                                                                                                                         glycoconjugates.
--- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
--- SUBCELLULAR LOCATION: Membrane-associated (By similarity).
--- TISSUE SPECIFICITY: Expressed in brain.
--- SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                        MEDLINE-99143165; PubMed-9988745;

-!- FUNCTION: Probable glycosyltrandsrase (By similarity).

-!- CATALYTIC ACTIVITY: UDP-N acetyl.D-Glucosaminyl-proteoglycan =

UDP + N-acetyl-alpha-D-glucosaminyl-(1->4)-beta-D-glucuronosyl-

(1->4)-N-acetyl-alpha-D-glucosaminyl-proteoglycan.

(1->4)-N-acetyl-alpha-D-glucosaminyl-proteoglycan.

-!- SUBCELLULAR LOCATION: Type II membrane protein. Endoplasmic

reticulum: (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PLSC HELPY STANDARD; PRT; 240 AA.

A Salzberg S.L., Venter J.C., Shapiro L., Praser C.M.,

Complete genome sequence of Caulobacter crescentus.",

Proc. Natl. Acad. Sci. U.S.A. 98:4136-4141(2001).

C -- SIMILARITY: TIEN V-TERMINAL REGION IS SIMILAR TO THAT OF OTHER

REGULATORY COMPONENTS OF SENSORY TRANSDUCTION SYSTEMS.

C -- SIMILARITY: TO PROKARYOTE SENSORY TRANSDUCTION PROTEINS.

R HSSP; Q56312; 3TMY.

                                                                                               This sequence represents a peptide fragment from a novel human type
ligand polypeptide corresponding to amino acid residues 23 to 53 of the
sequence represented in AAM3130 and is used in an assay to monitor
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
compositions containing this ligand may be used as a pituitary function
modulator, a central nervous system modulator or a pancreatic function
modulator. This ligand could have specific applications as a
prophylactic or therapeutic agent for dementia, depression, hyperkinetic
prophylactic or therapeutic agent for dementia, depression, hyperlyindactic or therapeutic agent for dementia, depression, hyperlyindactic or therapeutic agent for dementia, depression, hyperlyindacmia, epilepsy, amylotrophic lateral sclerosis,
cute myocardial infarction, infertility, spinocerebellar degeneration,
cute myocardial infarction, infertility, spinocerebellar degeneration,
coligogalactia, Assays can also be developed to screen compounds which are
capable of altering the binding activity of the ligand affecting
activation of the G protein-coupled receptor protein.

```
This sequence represents a peptide fragment from a novel rat type
ligand polypeptide corresponding to amino acid residues 22 to 52 of the
equence represented in AAMISIS and is used in an assay to monitor
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
compositions containing this ligand may be used as a pituitary function
modulator. A central nervous system modulator or a pancreatic function
modulator. This ligand could have specific applications as a
prophylactic or therapeutic agent for dementa, depression, hyperkinetic
syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia,
trauma, growth hormone secretory disease, hyper- and polyphagia,
hyperlipidaemia, hypercholesterolaemia, hypersjyceridaemia,
hyperlipidaemia, diabetes, cancer, pancreatitis, renal disease,
hyperlipidaemia, asthma, rhemmatoid arthritis, spinal injury,
translent brain ischaemia, epilepsy, amylotrophic lateral sclerosis,
cute myocardial infarction, infertility, spinocerebellar degeneration,
coligogalactia. Assays can also be developed to screen compounds which are
capable of altering the binding activity of the ligand affecting
activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rat type ligand; modulation; prolactin secretion; G protein-coupled receptor; GPCR; hypovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmenopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Prommel syndrome; Argonz-del Castilo syndrome; Porbee-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; oxytocia.

The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent condulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocoarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pluttery adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoms, infertility, impotence, amenorrhea, galactorrhea, cornegaly, chiari-frommel syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricearcinoma, hydatid mole, itruption mole, abortion, unthirity fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia. Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy Producing a 19P2 pituitary G protein receptor ligand - by cleavar of a fusion protein, useful for preventing and treating dementia, breast cancer, renal failure and autoimmune disease Length 31; 19P2 ligand, G protein coupled receptor; pituitary; prolactin releasing peptide; rat; dementia; breast cancer; 5; Indels 95.5%; Score 147; DB 20; 83.9%; Pred.          commercial inginatever production of 1972 completes the complete of the commercial ingination has cells as a recombinant fusion process, with human basic fibroblast growth factor (see AAV8394-95) that has been modified to include an N-terminal cysteine residue. The ligand is released from the fusion by cyanylation followed by amonolysis. 1972L has prolactin secretion-inhibiting properties. It can be used in the treatment and prevention of various diseases including sendle dementia, cerebrovascular dementia, and dementia associated with: genealogical disorders (e.g. Alzahemer's disease, Parkinson's disease, Pick's disease, Huntingron's disease), infectious disease to train contaction by drugs, metal and organic compounds), tumourigenic diseases (e.g. Creutzfeldt-Jakob's), endocrine or metabolic disease or toxicosis (e.g. brain tumour), traumatic diseases (e.g. chronic diseases (e.g. brain tumour), traumatic diseases (e.g. chronic diseases (e.g. brain tumour), traumatic diseases (e.g. chronic diseases associated with prolactin hypo and hypersecretion consciousness. It is also useful for prevention and treatment of these transfer disease associated with prolactin hypo and hypersecretion respectively, including: hyperprolactinaemia, pituitary adenoma, breast cancer, infertility, impotence and autoimmune disease (hypersecretion disorders). The 19P2 polypeptide/amide is also useful as a test creagent for study of the prolactin secretory function or as a readent for study of the prolactin secretory function or as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Producing a 19P2 pituitary G protein receptor ligand - by cleavage of a fusion protein, useful for preventing and treating dementia, breast cancer, renal failure and autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor; GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;
    This is the amino acid sequence of the human pituitary G
protein-coupled receptor ligand 19P2L. A method suitable for
commercial high-level production of 19P2L comprises expressing
the ligand in hose cells as a recombinant fusion protein e.g. with
human basic fibroblast growth factor (see AAV83796-97) that has
been modified to include an N-terminal cysteine residue. The
ligand is released from the fusion by cyanylation followed by
ammonolysis. 19P2L has prolactin secretion-stimulating and (at
high doses) prolactin secretion-inhibiting properties. It can be
used in the treatment and prevention of various diseases including:
entile dementia, cerebrovascular dementia, and dementia associated
with: genealogical disorders (e.g. Alzheimer's disease, Parkinson's
disease, pick's disease, Huntington's disease), infectious diseases
(e.g. Creutzfeldt-Jakob's), endocrine or metabolic disease or
confocials (e.g. brain tumour), traumatic diseases (e.g. chronic
diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
chiseases (e.g. brain tumour), traumatic diseases (e.g. chronic
diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
diseases (e.g. brain tumour), propes of dementia, depression,
hyperactive child syndrome (microencephalopathy) and disturbance of
consciousness: It is also useful for prevention and treatment of
diseases associated with prolactin hypo and hypersecretion
respectively, including: hypotence and autoimmune disease
(hypersecretion disorders), and seminal purhance of
corespectively, including: and seminal purhance of
the espectively independents), and seminal purhance of
consciousness in disorders), and seminal purhance of
consciousness and seminal syndrome and seminal purhance of
the espectively independents) and seminal purhance of
consciousness and seminal syndrome disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       osteoporosis, menopausal syndrome and renal failure (hyposecretion disorders). The 19P2 polypeptide/amide is also useful as a test reagent for study of the prolactin secretory function or as a lactogogue in mammalian farm animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Murine pituitary-derived ligand mature polypeptide sequence.

This represents the matured murine pituitary-derived ligand polypeptide sequence. The polypeptide is a ligand for the G-protein coupled orphan ceceptor designated GPR10 (human) or UHR-1 (rach). Cells transformed with a vector containing the ligand polypeptide. The ligand polypeptide are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to sereen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, e.g. to treat senile dementia, Alzhahaer's, Parkinson's or Huntington's diseases; Crentzfeld-Jakob disease; poisoning by heavy metals or drugs; diabetes; schizophrenia; disorders of growth cormone secretion; cancer; rheumatoid archritis, epilepsy and many others, also to improve post-operative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide.

Corpressing genes, as models of disease, for drug screening and as source of cell lines. The ligand polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GPR10; UHR-1; modularor; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementa; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; polsoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor;
                                        polypeptide ligand for orphan G protein coupled receptors - treating disorders of central nervous system, pituitary and

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-11 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant to the ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other cissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to ratise antibodies. They may also be used therapeutically, e.g. to treat senile dementia, Alzheimer's, Parkinson's or Huntington's diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; creutzfeld-Jakob disease; poisoning by heavy metals or drugs; creumatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and many others, also to improve post-coperative nutritional status and man vasopressor. Transgenic animals carrying the ligand polypeptide-expressing genes, as models of disease, for drug screening and as source of cell lines. The ligand colypeptide source of cell lines. The ligand cantisers, in drug development; for gene therapy and to develop creatises Amisch can tisers, in drug development; for gene therapy and to develop artisers, in drug developments artisers and to development antigent between the preparation of anti-ligand polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion

Identifying modulators of body weight by a combination of a cell-free or cell-based assay to identify modulators of GPR10, followed by an in vivo assay for the compounds effect on e.g. feeding behavior -

Example 2; Page 61; 82pp; English.

The invention relates to a method for identifying compounds useful for modulating body weight. The method comprises cell-free and/or cell-based assays that identify compounds which bind to and/or activate or inhibit the activity of GPR10, a G protein-coupled receptor. These assays are then followed by an in vivo assay of the effect of the compound on releasing peptide (PrRP; AAV87504) is a ligand of GPR10. Binding of PRR to GRR10 stimulates a signal transduction cascade, which results in an increase in food intake. Compounds identified using the method of the invention are useful for the modulation of body weight. Antagonists of GPR10 can be used to treat obesity, while GPR10 agonists can be used to treat sequence represents rat PrRP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunosssay can also be applied in clarifying the physiological functions of the ligand and its derivative Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

XX
CC
The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is CC diseases an analgesic or for treating, preventing or amaliorating or disease (Including Doredom, nausea, pigmentation, hypogonadism, hair CC disease (Including Doredom, nausea, pigmentation, hypogonadism, hair CC loss, and hypotension), adrenal gland hypofunction and obesity. The CC loss, and hypotension), adrenal gland hypofunction of the CC present sequence is a peptide used in the exemplification of the CC invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence Sequence Sequence Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Seq
